

Video Title: Biotechnician - Vaccine Manufacturing

Video Description: Biotechnology at Merck means working with the vaccines that treat patients. Tay Jefferson says the highlight of her career is working with cells that cure disease in babies and children.

Voiceover

Tay Jefferson is a Biotechnician at Merck and she is passionate about the vaccines that she works with to save children's lives.

Tay Jefferson, Biotechnician

:10

As I grow in this company I've learned so much about cells, about vaccines, about people (laughs).

:19

and experiences with different people in small groups, it's a good family setting for me. Being a biotechnician is a great job, the love of medicine keeps you going everyday and that keeps me working hard as well as my peers. I know that eventually it will be sent to a doctor and the doctor will be injecting it into a child and everyday that makes me feel good that if I do my job correctly, there will be a healthy baby. :51
