SAFETY DATA SHEET

Fenbendazole (0.5%) Solid Formulation

Suitable extinguishing media : Water spray
                          Alcohol-resistant foam

                          Dry chemical

Unsuitable extinguishing media : None known.

Specific hazards during fire fighting : Avoid generating dust; fine dust dispersed in air in sufficient concentrations, and in the presence of an ignition source is a potential dust explosion hazard.
                                      Exposure to combustion products may be a hazard to health.

Hazardous combustion products : Oxides of phosphorus
                                 Metal oxides
                                 Carbon oxides
                                 Chlorine compounds
                                 Sulfur oxides

Specific extinguishing methods : Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.
                                 Use water spray to cool unopened containers.
                                 Remove undamaged containers from fire area if it is safe to do so.
                                 Evacuate area.

Special protective equipment for fire-fighters : In the event of fire, wear self-contained breathing apparatus.
                                                Use personal protective equipment.

SECTION 6. ACCIDENTAL RELEASE MEASURES

Personal precautions, protective equipment and emergency procedures : Use personal protective equipment.
                                                                    Follow safe handling advice (see section 7) and personal protective equipment recommendations (see section 8).

Environmental precautions : Avoid release to the environment.
                            Prevent further leakage or spillage if safe to do so.
                            Retain and dispose of contaminated wash water.
                            Local authorities should be advised if significant spills cannot be contained.

Methods and materials for containment and cleaning up : Sweep up or vacuum up spillage and collect in suitable container for disposal.
                                                      Avoid dispersal of dust in the air (i.e., clearing dust surfaces with compressed air).
                                                      Dust deposits should not be allowed to accumulate on surfaces, as these may form an explosive mixture if they are released into the atmosphere in sufficient concentration.
                                                      Local or national regulations may apply to releases and disposal of this material, as well as those materials and items employed in the cleanup of releases. You will need to determine which regulations are applicable.
                                                      Sections 13 and 15 of this SDS provide information regarding certain local or national requirements.
